

Altran Scandinavia Environmental Policy

29.08.2017

1. Introduction

Altran Scandinavia believes in a circular approach on economic growth and we are following the recommendations stated in the 2014 report of Intergovernmental Panel on Climate Change (IPCC), as well as complying with Sweden's national environmental objectives based on the UN Global Goals.

IPPC's report on climate change is stating that the negative effect of greenhouse gas could be limited by enhanced scientific research, increased resource-use efficiency and greater adoption of clean and environmentally sound technologies in industrial processes. Altran Scandinavia is today a partner in many of such projects and will continue to strive to be an important factor when it comes to environmental technology and innovation.

Altran benefits from a relatively modest carbon footprint, making Altran's principal contributions to reduce greenhouse gas emissions indirect, achieved on behalf of clients. Therefore, our main focus is to help our customers reach increased technical environmental performance.

Altran believes that our green technologies services could contribute to:

- Decrease the level of greenhouse gas emissions from road vehicles
- Decrease the level of greenhouse gas emissions from air traffic
- Contribute to optimize and develop new technologies in the energy sector
- Develop IoT solutions for improved environmental performance in general

2. Environmental Policy

Altran Scandinavia's mission is to offer services and solutions with highest sustainability performance and contribute to climate-resilient pathways for sustainable development.

We shall do this by helping our customers develop the green technologies of tomorrow for increased energy efficiency and decreased usage of natural resources, as well as reduce our own environmental impact internally. In particular, Altran Scandinavia is committed to provide efficient and sustainable engineering solutions for high-impacting customers by contributing with research and innovations for improved energy optimization and increased resource-use efficiency throughout the life cycles of the products.

As the principal way of tackling today's environmental challenges, Altran Scandinavia shall aim to path towards sustainability by focusing on these critical areas:

- By innovation and technology help our customers increase the sustainability performance and meet current and future environmental requirements
- Reduce the environmental impact of internal activities and take a proactive approach on our environmental aspects
- Increase knowledge and awareness of sustainability issues throughout the company and to all our employees
- Encourage all parties in the supply chain to meet up to the sustainability standards
- Live up to or exceed the applicable environmental legal requirements and engage in contributing to continuous improvements

Gothenburg, 29-08-2017

Fredrik Nyberg, CEO Altran Scandinavia
